Flitto selects Pentoma®'s Automated Web Penetration Testing to prepare for IPO

(Image source: Flitto)

Flitto is an integrated platform and language data company that provides diverse translation services. It develops and markets its global crowd-sourcing translation platform as well as professional and AI translation services. Founded in 2012, Flitto now serves over 10 million users in 173 countries, supporting 25 different languages.

As Flitto prepared for its July, 2019 IPO, the company had concerns about cyberattacks which could damage its brand and reputation in the marketplace. Moreover, the company was worried cyberattacks could be even more potent after its IPO. They decided they needed a comprehensive penetration test, and to do the test sooner rather than later.

The Flitto team was not sure who to trust for this sensitive matter, and did not want to go through a lengthy selection process in choosing its pen testing vendor. After narrowing down the options, Flitto selected Pentoma® from SEWORKS as it provides an automated and rapid testing process for web applications. Simply provide the URL, and Pentoma® does the rest.

"Pentoma® discovers and analyzes many different vulnerabilities and reports only on those which can be exploited and cause harm to our web site. I was especially happy to see the

results in a short period of time as we were in a hurry to fix any vulnerabilities to prepare for our Initial Public Offering", said Daniel DongHan Kang, the CTO of Flitto.

With Pentoma®, Flitto successfully and securely prepared for its IPO process. Flitto is now publicly listed on KOSDAQ (part of the Korea Stock Exchange), and raised $33 million during its two-day public offering.
